February 11, 2021, 11:00 a.m.

Addressing conservation with marine spatial planning in the age of climate change

Dr. Elena Gissi, PhD, Marie Sklodowska Curie Fellow

National Research Council, Institute of Marine Sciences, Venice, Italy

in collaboration with Stanford University, Hopkins Marine Station, USA

Dr. Gissi will discuss the challenge of addressing conservation problems with marine spatial planning (MSP) in the framework of sustainable blue growth, and propose cases and solutions by producing the relevant ecological knowledge to inform decisions. In the age of climate change (CC), MSP faces new challenges, such as understanding the response of the marine environment to the combined effects of CC and other local human stressors. Dr. Gissi will give a perspective on sex-based analysis in marine sciences to revise the traditional MSP process in a context of a fast-changing climate.
